This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1.   (Previously Presented) A system comprising:

a video display configured to communicate with a receiving system and to display a video broadcast; and

a computing device configured to communicate with the receiving system, the computing device having a second display configured to concurrently display an Electronic Programming Guide (EPG) corresponding to the video broadcast,

wherein the computing device is configured to display at least a portion of the EPG on the second display while the video display is concurrently displaying at least a portion of the EPG.

2-4.   (Canceled)

5.   (Previously Presented) The system of claim 1, wherein the computing device is a Personal Digital Assistant (PDA).

6.   (Previously Presented) The system of claim 1, wherein the computing device is a Web Phone.

7-8.   (Canceled)

9.   (Previously Presented) A method comprising:

receiving, at a computing device in communication with a first video display, program listing data associated with a video broadcast being displayed on the first video display, the computing device having a second display;

displaying on the second display an Electronic Programming Guide (EPG) based on the received program listing data and corresponding to the video broadcast being displaying on the first video display;

receiving user input at the computing device corresponding to a request to display at least

a portion of the EPG on the first video display while concurrently displaying at least a portion of the EPG on the second display; and

causing at least a portion of the EPG to be displayed on the first video display while concurrently displaying at least a portion of the EPG on the second display.

10-12. (Canceled)

13. (Previously Presented) The method of claim 9, wherein the computing device is a Personal Digital Assistant (PDA).

14. (Previously Presented) The method of claim 9, wherein the computing device is a Web Phone.

15-16. (Canceled)

17. (Previously Presented) A machine readable medium having stored thereon a set of instructions, which when executed cause a computing device to perform a method comprising:

receiving program listing data associated with a video broadcast being displaying on a first video display;

displaying on a second display an Electronic Programming Guide (EPG) based on the received program listing data and corresponding to the video broadcast being displaying on the first video display;

receiving user input corresponding to a request to display at least a portion of the EPG on the first video display while concurrently displaying at least a portion of the EPG on the second display; and

causing at least a portion of the EPG to be displayed on the first video display while concurrently displaying at least a portion of the EPG on the second display.

18-20. (Canceled)

21. (Previously Presented) The machine readable medium of claim 17, wherein the

computing device is a Personal Digital Assistant (PDA).

22.   (Previously Presented) The machine readable medium of claim 17, wherein the computing device is a Web Phone.

23-24. (Canceled)

25.   (Previously Presented) The system of claim 1, wherein the computing device and the video display are configured such that the entire EPG is displayed on the video display concurrently while the entire EPG is displayed on the second display.

26.   (Previously Presented) The method of claim 9, further comprising displaying the entire EPG on the video display concurrently while displaying the entire EPG on the second display.

27.   (Previously Presented) The machine readable medium of claim 17, the method further comprising displaying the entire EPG on the video display concurrently while displaying the entire EPG on the second display.

28.   (Previously Presented) The system of claim 1, wherein the computing device is configured to transmit a signal to the receiving system corresponding to an instruction to display at least a portion of the EPG on the video display concurrently while at least a portion of the EPG is displayed on the second display.

29.   (Previously Presented) The method of claim 9, further comprising transmitting a signal to a receiving system connected to the video display, the signal corresponding to an instruction to display at least a portion of the EPG on the video display concurrently while displaying at least a portion of the EPG on the second display.

30.   (Previously Presented) The machine readable medium of claim 17, the method further comprising transmitting a signal to a receiving system connected to the video display, the signal corresponding to an instruction to display at least a portion of the EPG on the video

display concurrently while displaying at least a portion of the EPG on the second display.

31. (Previously Presented) The system of claim 1, wherein the computing device and the video display are configured such that less than the entire EPG is displayed on the video display concurrently while at least a portion of the EPG is displayed on the second display.

32. (Previously Presented) The method of claim 9, further comprising displaying less than the entire EPG on the video display concurrently while displaying at least a portion of the EPG on the second display.

33. (Previously Presented) The machine readable medium of claim 17, the method further comprising displaying less than the entire EPG on the video display concurrently while displaying at least a portion of the EPG on the second display.

34. (Previously Presented) The system of claim 1, wherein the computing device and the video display are configured such that the portion of the EPG displayed on the computing device is the same as the portion of the EPG concurrently displayed on the video display.

35. (Previously Presented) The system of claim 1, wherein the computing device is further configured to display a preview of a broadcast program displayed in the EPG.

36. (Previously Presented) The system of claim 35, wherein the computing device and the video display are configured such that the preview of the broadcast program is displayed on the computing device concurrently while a separate broadcast program is displayed on the video display.

37. (Previously Presented) The method of claim 9, wherein the portion of the EPG displayed on the first video display is the same as the portion of the EPG concurrently displayed on the second display.

38. (Previously Presented) The method of claim 9, further comprising displaying on the

second display a preview of a broadcast program displayed in the EPG.

39.   (Previously Presented) The method of claim 38, wherein the preview of the broadcast program is displayed on the second display concurrently while a separate broadcast program is displayed on the first video display.
